L I T E P A P E R

Dacxi Coin.

An introduction to
the cryptocurrency
of the Dacxi Chain.

The Dacxi Coin is the cryptocurrency of the Dacxi Chain, which will deliver the world's first global crowdfunding ecosystem. Its whitepaper covers the core public details of the project and coin attributes. This litepaper is a summary of that whitepaper to appreciate the coin's fundamentals.

Dacxi Chain

Dacxi Chain is the pioneer of a decentralised global equity crowdfunding solution that will solve the scaling challenge faced by local crowdfunding companies around the world. By empowering an entrepreneur anywhere in the world with access to 'Silicon Valley' levels of growth capital from a vast pool of investors - also based anywhere in the world - Dacxi Chain will be the first to provide a global scaling solution.

This revolutionary new solution will be enabled by blockchain technology and a cryptocurrency-based global payment system using the Dacxi Coin, facilitating investments in a way that is currently impractical using fiat banking.

Since 2017, the Dacxi Chain team has been pioneering the technology necessary to deliver this project. In 2018, The Dacxi Coin's enjoyed

a successful ICO and was listed on external exchanges in early 2021. Its intrinsic demand and market appeal are fundamentally based on the Dacxi Chain's upcoming launch in 2023.

Given a booming yet highly concentrated US\$231 billion global early-stage venture capital market¹, the global crowdfunding should achieve US\$100 billion of investment annually from tens of thousands of funded deals and millions of investors from across the globe.

Five Dacxi Coin Value Drivers

The Dacxi Coin is classified as a 'utility token' with its value determined by demand, which is created by five value drivers listed below. It is neither asset-based nor an investment product — therefore, it is not a security (as verified by two independent legal opinions for exchange listings in EU and Singapore).

The five coin value drivers are:

1

Transactional Currency

Used to transfer the value of investment transactions globally at the heart of the Dacxi Chain ecosystem. Allows for the rapid, low-cost, secure movement of money compared to fiat systems or stablecoins. Part of an internal automated payment system.

2

Blockchain Currency

A blockchain currency for the payment of blockchain fees, node staking, and governance on the Dacxi Blockchain.

3

Exchange Currency

Allowing global transactions on tokenised secondary exchanges designed to provide liquidity to tokens launched on the Dacxi Chain.

4

Community Currency

Allows for community development and eCommerce.

5

Incentive Currency

Used for incentivising lead acquisition and staff retention. This has been very effective from 2018 in Dacxi Wealth and will be retired in 2023.

Dacxi Coin in a Nutshell

Definition

The Dacxi Coin is the native currency of the Dacxi Chain, a global crowdfunding ecosystem. It is a utility token, not a security, as proven by two independent legal opinions.

Dacxi Coin Issuer

The Dacxi Coin is issued by Dacxi IP Pte Ltd.

Value Drivers

Value is driven by five use cases and depends on user and investor demand.

Blockchain and Miners

The Dacxi Coin is currently based on the ERC20 protocol utilising the Ethereum (ETH) blockchain and its mining network. All coins have been 'pre-minted' by the company. By 2025, all coins will be migrated to the new Dacxi Blockchain retaining their value and listings.

Listings

Dacxi Coin is listed on a number of external exchanges.

Purpose

The purpose of the Dacxi Coin is to power the Dacxi Chain business ecosystem — primarily by facilitating the international transfer of investments and Dacxi Blockchain operations.

Ownership

Individuals, companies, and trusts own coins. As of 2022, owners of Dacxi Coins number in the tens of thousands.

Numbers

Ten billion coins have been issued. No more Dacxi Coins will be produced.

Coin Allocation

Dacxi's Initial Coin Offering (ICO) was in 2018, so classic 'tokenomics allocation' is irrelevant. Dacxi IP Pte Ltd owns less than 10%, and the only escrow is over staff allocations measuring less than 2% of all coins.

Disclaimer. While this is not a marketing or offer document, some readers may be interested in purchasing the Dacxi Coin. It is important that they undertake their own due diligence in order to evaluate any and all risks that might be associated with Dacxi and Dacxi Coins. Please understand that the purchase of any of Dacxi's products is potentially high reward but with inherent risk.
